PYTHON FOR WEB

DJANGO EXPLAINED

Render First Page

problem solution approach

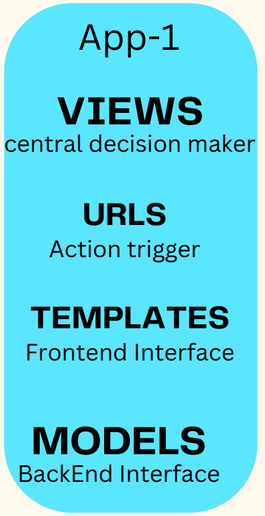
Presented By

INSIGHT BUILDER

HOWS IT DONE?

At App Level

- Create a url path in urls.py
- Import necessary functions
- Add "path" the url_patterns list along with trigger function
- Create / Get HTML file to render
- Write trigger function in Views file to render HTML



At Project Level

- urls.py already available at project level
- Add "path" the url_patterns list along with trigger function
- Create / Get HTML file to render
- Write trigger function in Views file to render HTML
